Confirm your order before the 1th of March at the latest for a delivery the ~25th of April 2026

After this date, the delivery will need 1 additional month.

This is a personalised, tailor-made product for which cancellation, modification and retraction are not possible.

Custom toroidal transformer

We offer a service of custom toroidal transformers built according to your needs. There is no minimum order quantity (you can ask for one piece only).

Custom transformers are available in three profiles (standard / low / high) with several types of optional supports.

Our toroidal transformers have a class IP00 protection, class B insulation. They are subjected to a 4kV flash test and comply with ISO9001 TUV CERT.

Possibilities

Use the tool below to specify the characteristics of your custom toroidal transformer. Price is calculated automatically.

If your toroidal transformer has to meet special requirements or characteristics that lay beyond the capabilities of this calculator, please contact us to request a personalized quote.

Primary circuit

Primary Winding | 0 - 230 V | Delete

+ Add new primary winding

Secondary circuit

Secondary Winding | 0 - 25 V | 2.8 A | Edit | Delete

Secondary Winding | 0 - 50 V | 0.5 A | Edit | Delete

+ Add new secondary winding

Options

Transformer Frequency 50Hz

Electrostatic screen | Thermal fuse | Magnetic screen (?)

Profile : Standard

Support : SF 01

Summary

Profile : Standard
Total Power : 95.00VA
Frequency : 50Hz
Primaires:
1 x 0 - 230 V
Secondaires:
1 x 0 - 25 V / 2.8 A (70.00 VA)
1 x 0 - 50 V / 0.5 A (25.00 VA)
Support SF01
+ Electrostatic Screen
+ Magnetic Screen

Specifications

Diameter : 90 mma
Height : 45 mm
Weight : 1.16 kg
Regulation : 9.02 % (?)

Notes :

- Support SF01 : + 1.26€

Unit price : 81€ TTC

Quantity : 1

ADD TO CART

Total Price : 81€ TTC

How to build your custom transformer :

- Version 1.24 : Please update your cache (ctrl+F5) to access new options.

  You can now save your custom transformer template in a local file and load it for later use or edit

  - Use the "SAVE TEMPLATE" button to save the file.
  - Use the "CHOOSE FILE" button to load your file.
- Write the primary voltage of your transformer in the "PRIMARY CIRCUIT" section.
- Then, input the voltage and max intensity of your first secondary winding in the "SECONDARY CIRCUIT" section.
- To add a new winding (primary or secondary) click the "NEW WINDING" button in the adequate section. A new line appears. Do not forget to specify the voltage and intensity that you need. "
- You can remove a winding with the button "REMOVE WINDING". Please note that your transformer must have at least one primary winding and one secondary winding.
- You can add intermediate cables to a secondary winding. It can be a midpoint (12-0-12V) or a free intermediate cable (0-3-5V). To do this, use the "EDIT" button on the corresponding secondary winding.
- Caution : a winding cannot have a midpoint and free intermediate cables at the same time. You have to disable one to use the other.
- Your custom transformer cannot have a unlimited number of cables. Leave the mouse cursor on any button that adds winding, midpoint or cable to know if you are close to those limitations.
- Once satisfied with your coils, focus on the OPTIONS section. This section allows you to ask for an electrostatic screen, a magnetic screen and a thermal fuse. YOu can also specify the profile of your transformer and request a specific support. The choice of a support is optional and you can leave the default selection if your project does not require special mounting.
- The "SUMMARY" section provide a summary of the windings values and all the options. Carefully check that the information is correct and complete : it is on this basis alone that your toroidal transformer will be built. If something is not writen here, it will not be a part of the transformer.
- The Specifications section is given as an indication relative to the power and profile of your transformer. Please note that the proposed values do not include the support and the number of windings which can significantly affect the dimensions & weight.. The more winding and cables, the less precise are those numbers.
- If something is wrong with the template, the app lists what is wrong under the options section. Until the errors have been solved, it is neither possible to save the template nor to add the transformer to cart.
- After verifying the summary, choose a quantity and press the add to cart button. Remember, once in the list, the transformer can not be changed. The only way to modify it is to go to your cart, remove the transformer and start again.

CUSTOMERS REVIEWS
Check reviews or share your opinion writing a product review !

SECURE PAYMENT
We offer you most popular and secure payment methods.

INTERNATIONAL DELIVERY
We deliver to many countries and offer different carriers.

CUSTOMER SERVICE
Our customer service is available from Monday to Friday, from 9 am to 5 pm to answer your questions by mail.

LOYALTY POINTS
Buy and save money! With each order you earn points that can be converted into coupons.

Audiophonics is a company created in 2005, specialized in the distribution and sale of Audio, HiFi, Do It Yourself and electronic products on the internet. To propose qualitative products at the best price, here is the philosophy that guides us every day. We put a strong emphasis on being the first to offer innovative products that match the expectations of the market and customers.

To honor these points, a daily technological watch is carried out by our team composed of passionate and specialized people. In addition, our expertise and knowledge of the DIY audio market allow us to imagine, design, and manufacture HFI audio products which are designed to satisfy customer demands at truly attractive prices. We listen to our customers every day, which is why we favor the addition of products on request. Do not hesitate to contact us, our team will answer you quickly.
